

Skincerity FAQs:

Q: Are NuCERITY Products Available In Retail Stores?

A: No. NuCERITY is a network marketing company that distributes products through a network of affiliates worldwide. Because of this, our products are not sold through retail stores.

Q: How Can I Order NuCERITY Products?

A: Due to the nature of our business, NuCERITY products are sold only through independent affiliates. In order to purchase products, contact me through www.nucernitynj.com.

Q: How does Skincerity work like your skin?

A: Skincerity contains a patented formula that when applied, resembles an extra, invisible layer of skin in the way it keeps your own body's moisture in, keeps external irritants out, and is breathable. Basically, Skincerity creates a sealed, yet breathable environment for your skin to retain its own natural moisture and receive antioxidants for many hours while your sleep. It works like a second skin.

Q: What type of fragrance is used in Skincerity?

A: Skincerity is available in regular scent. Our fragrances are RIFM (Research Institute of Fragrance Materials) approved, which means these fragrances are unlikely to irritate the skin.

Q: Is Skincerity safe for all ethnicities and skin types?

A: All skin types and nationalities have had success with Skincerity.

Q: Is Skincerity FDA approved?

A: The FDA has guidelines for cosmetic skin care products and their safety - Skincerity is a physician grade cosmetic product that follows and meets those guidelines.

Q: Where should I keep Skincerity?

A: For best results, store in an upright position at room temperature.

Q: How often should I use Skincerity for maximum results?

A: To receive maximum results including hydration of the skin, it should be used daily. You will notice results the first time you apply the product.

Q: Do I have to change my current regimen?

A: No, you simply roll on Skincerity last and allow the product to flash dry in seconds and go to bed.

Q: How long will my bottle last?

A: The 1 oz bottle is the standard size. Most users report that the 1 oz bottle lasts approximately 30 days with average use.

Q: How are the ingredients in Skincercity Nightly Breathable Barrier product absorbed?

A: The ingredients delivered to the skin for absorption are two primary antioxidants: Vitamin E and Vitis Vinifera (grape seed oil).

Q: Why Vitamin E?

A: Vitamin E is an important ingredient in Skincercity. Clinical tests have proven that Vitamin E has a strong anti-aging/anti-wrinkle effect on the skin. Its antioxidant characteristics help improve the appearance of dry, damaged skin.

Q: Why Grape Seed Oil?

A: Vitis Vinifera (grape seed oil) is a powerful antioxidant that repairs damaged and stressed tissues, possessing regenerative and restructuring qualities which allow a better control of skin moisturization. Vitis Vinifera contains proanthocyanidins, which are very helpful in diminishing the sun's damaging effects, lessening free radical damage, and in wound healing.

Q: Skincercity has acetone as an ingredient. Will it dry my skin?

A: No. The Skincercity® pharmaceutical-grade acetone (2-Propanone) does not dry the skin. The Skincercity acetone is used to prepare the skin, turn the liquid in the bottle into a clear film, keep bacteria out of the bottle, and create skin healthy micro-porous breathing holes in the film. Once the liquid has turned into the breathable barrier film (less than 5 seconds), the Skincercity acetone has evaporated off the skin. The patented formula, developed with National Institutes of Health funding, harnesses the “magic of acetone” by using this dermatology cleansing agent to produce hydrated, healthy, and younger looking skin.

Q: How do we know exactly what ingredients are in each product?

A: The ingredients are labeled on each product.

Q: Where can I find additional research and product information?

A: Login into the backoffice. All current product information can be found in the Form section under Clinical Proof. We encourage you to do your own research.
